

- AM8.5 Use differentiation to help determine the shape of the graph of a given function, including:
- a. finding stationary points (excluding inflexions)
  - b. when the graph is increasing or decreasing
- AM8.6 Use algebraic techniques to determine where the graph of a function intersects the coordinate axes; appreciate the possible numbers of real roots that a general polynomial can possess.
- AM8.7 Geometric interpretation of algebraic solutions of equations; relationship between the intersections of two graphs and the solutions of the corresponding simultaneous equations.

This document was initially designed for print and as such does not reach accessibility standard WCAG 2.1 in a number of ways including missing text alternatives and missing document structure.

If you need this document in a different format, please email [admissionstesting@cambridgeassessment.org.uk](mailto:admissionstesting@cambridgeassessment.org.uk) telling us your name, email address and requirements, and we will respond within 15 working days.

This document contains equations and symbols which, at present, we are not able to produce adequately for accessibility. We are working to improve this.

We are Cambridge Assessment Admissions Testing, part of the University of Cambridge. Our range of research-based admissions tests connect universities, governments and employers to the most suitable applicants from around the world.
